**Abstract:** This article explores the teaching of English to students in a digital learning environment and the impact of digital technologies on the educational process. It focuses on studying new pedagogical approaches to teaching English to primary school students. The application of digital learning environments in education, the influence of lesson methodologies adapted to the psychological characteristics of students, and the use of digital resources and platforms to develop individual and group learning skills are discussed.

**Keywords:** English language, digital learning, primary school students, psychological characteristics, educational process, age-specific features, method.

The education reforms implemented in our country aim to organize the educational process in the primary education system in a way that ensures the comprehensive development of young individuals into well-rounded personalities. These reforms contribute to creating effective forms and methods of teaching, optimizing the pedagogical and psychological foundations of educating and training children of primary school age, and developing scientific perspectives, pedagogical theories, and didactic materials.

According to the concept of higher education in the Republic of Uzbekistan, the responsibilities of a specialist are defined as follows: "A specialist, regardless of their field, must be able to work in creative teams, have training in management and marketing, and clearly understand the economic, social, and cultural aspects of implementing new technologies." These points also directly apply to educators. Primary school teachers must possess sufficient skills and knowledge about the psychological and physiological characteristics of young students, as well as the organization, management, and evaluation of the educational process, ensuring balance between teaching methods and student needs.

In today's era of globalization, learning foreign languages, especially English, has become crucial. The rapid development of digital technologies has elevated educational processes to a new level. Exploring the pedagogical and psychological opportunities of digital learning environments for teaching English to primary school students is a pressing issue for organizing this process effectively.

**Advantages of Digital Learning Environments for Primary School Students:**

1. **Individual Approach:** The ability to select activities tailored to the student's abilities.
2. **Interactivity:** Engaging educational processes through multimedia tools such as games, videos, and interactive lessons.
3. **Access to Additional Resources:** Availability of diverse audio and visual materials on online platforms.

4. Improved Educational Quality: Digital tools enhance students' retention and comprehension skills.

Psychological Characteristics of Primary School Students in Learning English:

1. Curiosity: Children are eager to learn new things.
2. Learning Through Play: Incorporating game elements boosts student motivation.
3. Short Attention Span: Children aged 7–11 struggle to focus for more than 10–15 minutes, so short and varied activities are essential.

Pedagogical Opportunities:

1. Gamification: Increasing student interest through game-based lessons.
2. Visual Materials: Using images, videos, and graphics to explain topics.
3. Differentiated Approach: Adapting the learning process to students' individual characteristics and working with them one-on-one to facilitate their development and language learning.

Modern Methods for Teaching English to Primary School Students:

1. Interactive Platforms: Utilizing platforms like Quizlet, Duolingo, and Lingokids during lessons to enhance students' engagement and interest in language learning.
2. Multimedia Learning Tools: Enriching the educational process with multimedia presentations and video lessons. Showing educational cartoons or short videos during lessons can help create modern, engaging sessions.
3. Social Learning: Organizing group activities to develop students' communication skills and expand their vocabulary.

Digital learning environments serve as effective tools for teaching English to primary school students. These environments utilize pedagogical and psychological opportunities to make language learning engaging and interactive. Thus, modern educators must skillfully integrate digital technologies into their teaching.

Teaching English to primary school students in a digital learning environment provides many pedagogical and psychological opportunities. These tools help students learn faster and more effectively, meet their psychological needs, and increase their motivation for studying. Digital resources enhance students' active participation and allow educators to make lessons more efficient and engaging with innovative methods.
